

Appendix II: Microbes With Associated Disorders

This appendix is the second of three that provide support for ideas proposed in *The Falling Apart Syndrome*. These ideas are described in detail at <http://www.polymicrobial.com>, but they can be summarized as follows:

- Most disorders are caused by infections (http://en.wikipedia.org/wiki/Paul_W._Ewald)
- Many hard-to-treat disorders are polymicrobial, i.e. they are caused by multiple microbes (<http://www.ncbi.nlm.nih.gov/books/NBK2475/>).

If these two ideas are right, then we would expect:

1. Many disorders would be associated with more than one microbe, as shown in Appendix I: (http://www.polymicrobial.com/attach/App_I_Disorder-Microbe.pdf).
2. Many microbes would be associated with more than one disorder, as shown in this appendix (see **Table AII-1 below**).
3. Many disorders would be associated with other disorders, as shown in Appendix III: (http://www.polymicrobial.com/attach/App_III_Disorder-Disorder.pdf)

The appendices are not comprehensive; they only contain items I stumbled onto while working on *The Potbelly Syndrome* (<http://www.potbellysyndrome.com>) and *The Falling Apart Syndrome*. The appendices are not systematic, either. Metabolic syndrome and syndrome X, for example, are very similar disorders but they are listed separately in the table because they were discussed as separate disorders in the scientific literature.

If see any errors, or you want me to add microbe-disorder pairs to this appendix, send the URLs of supporting scientific articles to me at: russ@potbellysyndrome.com.

Warning

Do not use this list to diagnose or treat any disorder. If you see a microbe-disorder pair that might be related to a disorder you have, go to PubMed (<http://www.pubmed.gov>) and search for relevant studies. If you find something interesting, print it and let your doctor decide if it is relevant to your case. Remember, “associated” does not mean “causes” or “caused by.”
